DETAILED ACTION

Election/Restrictions

1. Claims 1-10 and 18-24 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 30 April 2007.

Applicant's election without traverse of Group II, claims 11-17 is acknowledged.

Claim Rejections - 35 USC § 112

2. Claims 12-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 12-17, "An assay device" should be changed to -The assay device" for clarity.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 11-17 are rejected under 35 U.S.C. 102(e) as being anticipate by Meyerhoff et al (US 5,830,860).

Meyerhoff discloses an enzyme sandwich assay cassette comprising a microporous membrane support having a layer of conductive metal coated thereon, a capture antibody layer over the conductive metal layer, a first chamber into which a enzyme-labeled antibody for the analyte is disposed and a sample receiving area. The enzyme is capable of catalyzing the production of an electrochemically detectable species. Meyerhoff also teaches having multiple electrodes with different anti-analyte antibody immobilized thereon to detect multiple analytes. See column 3, line 64 through column 4, line 45; column 9, lines 49-64, and examples 2 and 3.
